KEY

Focus Areas

Cybersecurity

ZTNA
Zero Trust Network Access

appgate

Secure, Flexible Zero Trust Architecture

Appgate provides robust and secure network access solutions through Software-Defined Perimeter (SDP) architecture. It ensures granular access control, network segmentation, and protection against evolving cyber threats, enabling organizations to safeguard their critical assets.

Email Security
Anti-phishing solution

End User Security Awareness Solution

PhishRod is a comprehensive anti-phishing platform that helps organizations protect against social engineering attacks and phishing threats. It offers real-time threat intelligence, incident response, and security awareness training to empower employees in recognizing and mitigating phishing risks.

Automation

DR Automation

Perpetuuiti is a platform that offers comprehensive business continuity and disaster recovery solutions. It enables organizations to minimize downtime, ensure data integrity, and recover critical IT systems swiftly in the event of any disruptions.

Network Automation

NetBrain provides an adaptive automation platform that aims to automate every NetOps workflow in order to reduce time and operating costs, to easily share knowledge as well as to distribute IT resources more efficiently. One time you have a problem, next time it becomes automated know-how by transforming CLI knowledge in automation

HPC

OOB Management

Out-Of-Band Management

Opengear, a Digi International company, delivers secure, resilient access and automation to critical IT infrastructure, even when the network is down. Provisioning, orchestration and remote management of network devices, through innovative software and appliances, enables technical staff to manage their data centers and remote network locations reliably and efficiently

High Performance Computing

Customized Solutions

Supermicro is a leading provider of advanced server, storage, and networking solutions. Their cutting-edge technologies empower businesses to optimize performance, increase scalability, and enhance energy efficiency in their data centers
